

Palsgaard® Mouldice 156

Functional Properties:

Dosage:

Product Profile

Product Type:	Palsgaard® MouldIce 156 is an integrated mixture of
	emulsifier and stabilizers.

Palsgaard® MouldIce 156 is developed for use in all types of **Application Areas:** ice cream, soft ice and milk ice.

Palsgaard® MouldIce 156 should be added to the mix while stirring

continuously.

Addition may take place at any temperature, but complete dissolution of the product is only obtained when heated to 65°C.

Palsgaard® MouldIce 156 provides the following advantages:

- Facilitates the incorporation of air into the mix giving a high and stable overrun.
- Prevents the formation of coarse ice crystals giving a smooth and uniform texture.
- Provides a creamy and relatively warm eating ice cream with slow melt-down properties.
- Protects the ice cream against heat shock damages, when exposed to fluctuating temperatures during distribution and storage.

The dosage of Palsgaard® Mouldice 156 depends on the composition of the mix and the viscosity required. Generally we recommend the following levels:

Fat content in the mix/recommended dosage:

4%	6%	8%	10%	12%
0.75%	0.70%	0.65%	0.60%	0.55%
